                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3, Application US/0972995
Patent No. 6426206
GREEAL INFORMATION:
APPLICANT: WEL, MING-Hui et al
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CL000904
CURRENT APPLICATION NUMBER: US/09/729,995
CURRENT FILING DATE: 2000-12-06
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 3
LENGTH: 29629
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   82198

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3, Application US/09754250
Patent No. 6376225
GENERAL INFORMATION:
APPLICANT: WEI, MING-Hui et al
TITLE OF INVENTION: ISOLATED HUMAN PHOSPHODIESTERASE
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECULES ENCODING HUMAN
TITLE OF INVENTION: PROSPHODIESTERASE PROTEINS, AND USES THEREOF
FILE REFERENCE: CLOO1063
CURRENT PAPLICATION NUMBER: US/09/754,250
CURRENT FILING DATE: 2001-01-05
NUMBER OF SEO ID NOS: 5
SOFTWARE: FastSEO for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 4; Length 111282;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Seguence
     The invention relates to a new isolated prostate-specific nucleic acid

(FSNA) molecule comprising the cDNA sequences appearing as ABK97574-
ARK97642 which encode prostate specific proteins appearing as
ABG68701-ABG68704. Or a sequence hybridising to a FSNA or which has 60%
Sequence homology with a PSNA. Also included are a method of determining
the presence of a PSNA in a sample, a vector comprising the PSNA,
a host cell comprising the vector, producing the polypeptide encoded by
the PSNA, a method of determining the presence of a PSP in a sample,
the PSNA, a method of determining the presence of a PSP in a sample,
a lagnosing and monitoring the presence and metastasses of prostate cancer
in a patient, a kit for detecting a risk of cancer or presence of cancer
in a patient (the kit comprising a means for determining the presence of
the PSNA or PSP in a sample of a patient) and a vaccine comprising the
colypeptide or the nucleic acid encoding the polypeptide. The PSNA, PSP
and anti-PSP antibody are useful for diagnosing and treating cancer in a
patient (e.g. by gene therapy). The nucleic acid molecule and polypeptide
are also useful as vaccines for treating cancer, particularly prostate
a PSP of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5286 TTTTTTGAGATGGAGTTTTGGTCTTGTTGCCCATGCTGGAGTGGAATGGCATGAYCAT 5345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5406 AGAIGGGAITACAGGCGCCCACCACCACTCGGCTAATGTTTGTATTTTAGTAGAGAT 5465

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antipsoriatic antiparkinsonan notropic; neuroprotective; varietary; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunosimulamit; cardiant; thrombolytic; caaqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidifiammatory; antibacterial; antivirial; antifiungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antlinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 11; Page 5297-5298; 5507pp; English.

The present sequence is human c-myb-related protein. The c-myb gene is a proto-oncogene which codes for a nuclear protein expressed primarily in haematopoietic cells. c-myb-related proteins are useful for screening agents which regulate their activity. Human c-myb-related genes can be regulated to prevent or treat diseases of the haematopoietic system such as anaemias including megaloblastic, normochromic and normocytic anaemia, haemolytic disorder, thalassaemia and haemoglobinopathies. Reagents that modulate the activity of c-myb-related protein is useful for treating c-myb-related protein associated disorders. Human c-myb-related gene is also useful in diagnostic assays for detecting diseases and abnormalities related to presence of mutations in the nucleic acid sequences which encode a c-myb-related polypeptide. They are also useful in antisense therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide encoding human c-myb-related polypeptide, for identifying reagents which modulate activity of c-myb-related polypeptide in hematopoietic diseases such as anemia and aplastic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                02-AUG-2001.
                                                                                                                                                                                                               ABB10980;
                                                                                                                                                       ABB10980
                                                                                                                               RESULT
                                                                                                                                                                                             2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polymetriae (II) sequences. (I) is useful as hybridisation probes, polymetrase chain reaction (FOR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymetrase chain reaction (FOR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymetration are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating a proders involving aberrant protein expression or biological activity. The polypeptide and polyucleotide sequences have applications in claspinostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and conformation acid sequences. The invention relates to novel genes (ABA07454-ABA08224) and proteins (ABB10743-ABB10980) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cencer, e.g. breast on ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parastic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5273 TTTTTTTTTTTTTTTTGAGATGGAGTTTTGGTCTTGTTGCCCATGCTGGAGTGGA 5332
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5333 ATGGCATGAYCATAGCTCACTGCAACCTCCACCTCCTGGGTTCAAGCAAAGCTGTCGCCT 5392
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated ovarian and/or breast cancer related nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders, particularly ovarian and/or breast cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and the proteins as useful in genetic vaccination, testing and the increase stem cell proliferation; to regulate haematopoiesis; and in conce, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemlas. AAU25510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5394 AGCCTCCCGGGTAGATGGGATTACAGGCGCCCACCACCACCACCACGCTAATGTATT 5453

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acid molecule encoding a reproductive system antige

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to 2175 novel human ovarian antigens (ABP41054-CC ABP43228) and to cDBAs encoding them (ABD54131-ABD56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the thrention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen of ovarian intigen polynucleotides and polypeptides in diagnosing, comprising human ovarian antigen antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tunnours of ovarian or breast origin, reproductive system of isorders (e.g., infertility, disorders of pregnancy, anovulation, colycystic ovary syndrome, ovarian cysts, and dysmenorrhoes), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vaginitis), immune disorders (e.g., congenital and acquired immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), conditions (e.g., anaemia), cardiovascular disorders.

Colond-related disorders, outoimmune oophoritis, systemic lupus erythematosus), crepiratory disorders, neurological disorders, gastrointestinal disorders and uninary system disorders. Ovarian antigen polypeptides and conditions modulate ovarian antigen expression or activity. The polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may else used as food additives or to prepare antibodies dentification of individuals and in forensic analysis, and the polynucleotides may be used as food additives or to prepare antibodies cuseful in disease diagnosis, drug targeting and phenotyping. The present

                                             The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically from the proteins are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and the proteins are useful in genetic vaccination, testing and the pone, cartilage, tendon and/or nerve tissue growth or regeneration; lumnume suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU39510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5274 TITITITITITITITITITGAGAIGGAGITITGGTCITGTTCCCAIGCTGGAGTGGA 5333

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08255-ABA09574 represent nucleic acids encoding them. The sequences ABA08255-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides. C antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides of the invention. Although novel, many of the propertides of the invention. Although novel, many of the propertides of the invention. Although novel, many of the optypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence of polypeptides of the invention activities; including cytckine, cell proliferation or cell differentiation activities; them cell growth factor activity; immunomodulatory activity; activit. C including cytckine, cell proliferation or cell immunomodulatory activity; acroer to Inhalbin-related activities; chambit incompleted activities; haemactopicies acroer cell proliferation or metastasis.

C chemotectic or chemokinetic activities, haemactatic, thrombotic or involved in oncogenesis, cancer cell proliferation or metastasis.

C chemotectic or chemokinetic activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliating edications accorary heart disease, conditions, e.g., by protein or gene therapy. Such conditions include carcers, haemactopoletic disorders (e.g., mysloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthritis), arterial ischaemia, bone disorders (e.g., mysloid or lymphoid cell capair prowth. Polypeptides mythous the treatment of viral, bealing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bealing and fungal infections in addition to immunomodulatory activities may be used in the treatment of viral, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                that can be used to augment or replace cells damaged by illness, autolumune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer -

notropic; neuroprotective, antibacterial; virucide; fungicide; contropic; neuroprotective; antibacterial; virucide; fungicide; copthalmalogical; and vulnerary activity. The protein and polynucleotide sequences, their agonsists and antagonists may be useful for treating, preventing and diagnosing diseases and disorders such as autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral isorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral isorders e.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungl and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Included in the invention are oligonucleotides AAF63780 — AAF63780 and peptide AAB75239 which are used in the identification and characterisation of the DNA and protein

Included in the invention are protein sequences AAB75288 - AAB75341 which are fragments of the secreted proteins and amino acid sequences with which these fragments share homology. Examples of the activities of the proteins and polynucleotides and the activities of their agonists and antagonists include, immunosuppressive; antiarthritic; antirheumatic;

                                                                                                                                                  A method for detecting the presence of neural thread protein (NTP) having a molecular weight of 8, 14, 17, 21, 26 or 42 kD in a human subject comprises (a) contacting a sample from a human subject that is suspected of containing the NTP with at least one molecule molecule of binding to the protein; and (b) detecting any of the molecule bound to the protein. The binding molecule is selected from an antibody free of natural impurities, a monoclonal antibody or a binding fragment of either of these. The method may be used for tumours and a malignant astrocytoma in a human.

polypeptide (II) sequences. (I) is useful as hybridisation probes, and gorenase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapphing, and in recombinant production of (II). The and gene mapphing, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques or restore normal activity of (II) of to to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and the produce data for this patent did not appear in the printed diagnostic amino acid sequences of this patent did not appear in the printed are the content of the produce of the content of this patent did not appear in the printed are the content of t
